

Information Management Product Workshop: Leveraging PASTA and EML-based Workflow Tools for LTER Data Synthesis

Wade Sheldon, John Porter and Corinna Gries

Placeholder report:

This workshop was held to develop and test workflows that leverage the PASTA framework, EML-described data and EML-based software to generate derived data products for one or more network synthesis projects (e.g. ClimDB, Veg-DB and Cross-Site Coastal Water Quality).

The workshop was also meant to provide feedback to workflow software developers, EML providers and NIS developers on any problems encountered to improve these resources.

The workshop was hosted at the North Temperate Lakes LTER in Madison, WI from June 24 to June 28, 2013.
