

LONG TERM ECOLOGICAL RESEARCH NETWORK OFFICE (LNO)

Call for Working Group Proposals

All the information needed to submit a proposal to the LTER Network Office can be found at:

<https://lternet.edu/synthesis/current-request-proposals/>

LTER Network Office
National Center for Ecological Analysis and Synthesis
735 State Street, Suite 300
Santa Barbara, CA 93101
Tel (805) 893-2500
<https://lternet.edu>

Overview

The LTER Network Office (LNO) fosters enhanced communication, collaboration, synthesis, training, and engagement across the [LTER Network](#). To promote analysis and synthesis of LTER data, the LNO requests proposals for synthesis working groups, with research to begin in February 2020. Funding is available for 2-4 projects of up to 2 years in duration (1 year projects are also acceptable). The project selection committee is most interested in proposals anticipated to return high impact results in the [seven core LTER thematic areas](#)¹, but proposals in other areas will also be considered. Proposers are encouraged to review the results of prior LTER synthesis working groups [here](#) and to review the synthesis resources [here](#). The LNO will hold informational webinars for anyone interested in learning more about the proposal process (See key dates below). Registration details and webinar recordings will be accessible on the LTER Network website (lternet.edu). Principal investigators should also feel free to contact the LNO (Jenn Caselle: caselle@ucsb.edu or Marty Downs: downs@nceas.ucsb.edu) to discuss research ideas.

The LNO is operated out of the National Center for Ecological Analysis and Synthesis ([NCEAS](#)) at UC Santa Barbara. The Center provides excellent meeting facilities, comprehensive in-house computing capabilities, and consultation and training for visiting scientists on analytical workflows and open and reproducible science practices, as well as in-person and virtual collaboration skills.

Key Proposal Dates and Deadlines

Informational Webinar #1	Thursday Aug. 22, 9am PST
Informational Webinar #2	Tuesday Sept. 17, 9am PST
Proposal Due Date	Wed, October 23, 5pm PST
Awards announced	early January, 2020
Projects begin	February, 2020

Who Should Apply

Proposals may be submitted by individuals of any nationality who hold a position in an academic institution, free-standing research institution, scientific society, governmental or policy agency, non-governmental organization, or a consortium of such institutions. Working group members should include one or more LTER researchers who are familiar with the LTER sites and data that will be used in the analysis. Synthesis research generally requires a large effort to integrate multiple datasets, thus, inclusion of one or more LTER site information managers who are deeply familiar with LTER datasets is encouraged. Please refer to the description of synthesis working groups for additional guidance regarding working group size and composition.

Funding

Generally, the working groups are expected to meet at NCEAS in Santa Barbara, CA where the LNO can provide significant logistical and technical support. One or more meetings at other venues are also possible if well-justified. To reduce project costs and carbon footprint, the LNO provides technical and logistical support for the use of virtual meetings as well as in-person meetings.

Funding is intended to offset meeting travel, lodging, and per diem expenses.

¹ Primary production, population studies, organic matter dynamics, mineral cycling, disturbance patterns and processes, land use and land cover changes and human-environment interactions (<https://lternet.edu/core-research-areas/>)

Working group budget requests should not exceed US\$55,000 per year, unless the proposers can bring additional funds from non-LNO sources. This level of funding is generally adequate to support a working group of 12 individuals meeting for four days three times per year in Santa Barbara. Working group costs may vary depending on group size, number of international participants, number of in-person vs. virtual meetings, and meeting duration. Smaller working groups, of shorter duration, are welcomed (for example, one year projects, or groups with <12 participants) and may allow more working groups to be funded. Proposals may involve activities with partial support from other institutions or agencies, and co-funding is welcomed but not required.

Please download and use this template to estimate your [working group budget](#).

What We Will Not Fund

- The LNO will not fund collection of new data or field research.
- The LNO will not fund projects that primarily address the goals of another organization.
- The LNO will not fund proposals requesting overhead or funds to be spent by the investigator at the investigator's home institution.

Data Expectations

We expect synthesis working groups to emphasize the use of existing LTER data. *Analysis and synthesis of data from more than one site is required.* Beyond that, we welcome the inclusion of data from other sources (e.g. datasets from individual researchers) or other networks (e.g. CZO, NEON, OBFS, ILTER) where appropriate to the questions being proposed

The LNO, the Environmental Data Initiative (EDI), and NCEAS have a strong commitment to developing means to locate, access, analyze, and make data broadly available, and to encourage an ethic of information-sharing. To this end **awarded working groups must agree to document and make derived data publicly available** according to the [LTER Network Data Access Policy](#).

Diversity Expectations

Working groups that include a **diverse** array of participants who are committed to the project will be favored. While assembling a group, please consider gender balance, career stage, and opportunities to include individuals from underrepresented institutions and groups. Please feel free to contact the LNO staff to discuss mechanisms for ensuring broader participation. Working group members must agree to the [LTER](#) and [NCEAS](#) codes of conduct, whether meeting in Santa Barbara or elsewhere.

Technical Liaison

Each working group will be required to designate a *technical liaison* to work with NCEAS' scientific computing team on the group's computing needs, including collaboration capabilities (project management, mailing list and collaborative workspace), data management and processing, as well as analytical needs (modeling, and metadata development and distribution). This person should be closely involved with the analytical aspects of the projects. The technical liaison could be one of the PIs, an LTER site Information Manager (IM), or another working group member who has agreed to fulfill this role. Support and training will be provided (see below).

Data Science Support

LNO/NCEAS provides a supportive and modern technology infrastructure for accomplishing your analytical and other computing/network-based needs. We have dedicated in-house staff to handle your queries and requests, ranging from desktop set-up and use, to accessing analytical servers that far surpass individual desktop capabilities. General training in reproducible workflows will be made available to funded working groups and there are intensive training opportunities for one or two interested individuals in each working group. More detailed information on this support can be found here: [NCEAS data science support](#).

Reporting

Principal investigators on approved projects will be expected to provide a project abstract of research objectives, anticipated work, and desired outcomes that will be posted on the LTER Network website shortly after funding

approval. LNO support should be cited in publications, as described in the [guidance for synthesis group PIs](#), and copies of articles accepted for publication should be sent to the LNO Communications Officer. Questionnaires requesting updates on synthesis working group experience and products are sent quarterly to PIs and are very important to measuring the success of LNO synthesis working groups. PIs may also be asked to participate in periodic synthesis webinars and other outreach engagements.

Guidelines for Proposals

The main body of the LTER synthesis working group proposals is relatively short (fewer than 2000 words **excluding** Cover Sheet, Figures, Tables, Literature Cited) but we require a number of supporting tables and documents (Table of Participants, Table of Datasets, CVs, Budget) that are described below. Please follow the formatting and submission instructions provided below.

Include the following in your proposal, where applicable:

COVER SHEET (1 page, not included in proposal body word limit)
Date of Submission
Descriptive Title
Short Title – Two or three words for use as a project name (25 characters max)
Working Group Leaders' Name(s), position(s), and complete contact information
Project Summary – A brief scientific abstract of your project (200 words maximum)
Proposed Start and End Dates – Proposed start and end dates of your project (month, year)
Is this a resubmission? – Yes/No (If yes, provide date(s) of previous submission(s).)
TABLE OF PARTICIPANTS (See suggested template, not included in proposal body word limit)
Names and affiliations of participants (maximum of 18). Please indicate what expertise they bring to the project (scientific and analytical), their role in or contributions to the project, career stage, and their participation status (<u>confirmed</u> , <u>invited but not confirmed</u> or <u>to be invited</u>)
Technical Liaison. Identify a technical liaison(s) in the working group for LNO/NCEAS computing staff. This participant should have analytical expertise and may in some cases serve as an information data manager at an LTER site. See above for description of the role of Technical Liaison.
Identify the person(s) who will be in charge of archiving the produced data. (This could be the Technical Liaison or other participant.)
TABLE OF DATA SOURCES (See suggested template. Not included in proposal body word limit.)
Brief summary of key datasets to be used in the project (e.g. ecosystem type, taxonomic group, key metrics or processes, time series length, location, number of sites or studies)
Source of the data: include URL/doi when publicly available and/or a person of contact (data owner)
Status of the datasets (for example, “will still need to be downloaded/acquired”, “raw’ datasets are in-hand”, “some exploration of datasets has been done”, “extensive harmonization of datasets has already been completed”)
List any anticipated legal or practical constraints associated with acquiring, using, and sharing project data.
BODY OF PROPOSAL (Not to exceed 2000 words, excluding figures and tables, literature cited)
Problem Statement: Clear and concise statement of what is to be done, why it is important, and how it will be accomplished. Provide a clear rationale for why this research would benefit from LNO/NCEAS support.
Proposed Activities: Brief description of methods and why they are appropriate.
Description of Data Sources: if not fully described in the Data Sources table (above)
Anticipated Results: Include description of expected outcomes, data products and software products.

Is this proposal (or a closely aligned proposal) under consideration elsewhere? If so, please briefly describe the circumstances.
Does this proposal build on data and/or code products created from a previous LTER or other synthesis project?
Anticipated Benefits: Identify key stakeholder/audiences/potential external collaborators for working group outputs with as much specificity as possible.
Working group management: Please summarize how the PIs intend to 'manage' the project to support productive collaboration. This could include (but is not limited to): methods for communication between in-person meetings, group facilitation, project management tools. See Synthesis Resources on the LTER Network website for guidance.
Timetable of Activities
Working Group Diversity: Brief summary of efforts to achieve working group diversity
OTHER REQUIRED DOCUMENTS (not included in proposal body word limit)
Curriculum Vitae for each working group leader: Two (2) page maximum, NSF-style biosketch
Budget (use provided budget template)

Formatting and Submission Instructions

Proposals will be accepted in digital format only, as a PDF file. Proposals should be submitted as single, complete documents, formatted to standard letter size (8.5" W by 11" L) with graphics embedded directly in the document. The body of the proposal should follow the cover sheet, followed by tables (Participants, Datasets) and CVs. Budget tables should be last in the pdf. Do not send compressed collections of files, such as .ZIP files.

Send the proposal document as an email attachment to proposals@lternet.edu. All those who submit proposals will receive an email confirming receipt within 24 hours of submission. If you do not receive a confirmation email, please call (805) 892-2500 with the first PI's name and proposal title. NCEAS administrative staff will follow-up with you. Please contact proposals@lternet.edu if you have difficulty submitting your proposal, or if you have extenuating circumstances that would prevent you from submitting a digital version of your proposal by the deadline.

For answers to questions about how to submit that not addressed here, please email proposals@lternet.edu or call (805) 893-2500.

For questions about proposal content, please contact Jenn Caselle (caselle@ucsb.edu) or Marty Downs (downs@nceas.ucsb.edu).

Proposal Review Process

Proposals are evaluated for their scientific merit and novel approaches as well as their contribution to LTER Network science. Proposals will also be evaluated for participant diversity and expertise (both scientific and technical). The proposal review panel includes both LTER scientists and non-LTER scientists. At the request of the panel, the LNO may obtain additional reviews from other individuals with expertise of special relevance to the proposed research.

The final decision on which proposals to fund will be made by the LNO Executive Director in consultation with the Chair of the LTER Science Council. Based upon panel discussions, the LNO may request some modifications to the proposal (e.g., adjustments to working group size or composition, inclusion of additional data resources) before funding is awarded.

Proposals received after the deadline will be returned without review. Proposals that are clearly inappropriate for LNO funding (e.g., those that are only peripherally related to LTER, requesting overhead, funds to be spent at the investigator's home institution, or funds intended to collect new data, etc.) will also be returned without review.
